

THE NEW PRODUCT:

ENG

Giraffe, the new PLG floor lamps, which are born from the slender, elegant and majestic lines of the highest existing mammal.

Giraffe takes from its animal of inspiration some key elements which are the long neck, that allows you to see far, its ponderous and balanced strength at the base, and its typical horns, symbol of uniqueness and protection, which at the same time give the lamp's design a touch of character.

It combines the huge and singular charm of the giraffe and the pleasure of a sophisticated and elegant **light from above**.

Like the giraffe, the new PLG product captures attention with its long design/body and its great ability to adaptation. In fact the structure of Giraffe allows it to adapt to **outdoor and indoor** spaces, it is equipped with a pole that can be adjusted to different heights and the head which can be rotated in different directions according to the needs of the environment.

The lamp's stem is available in **fixed** or **telescopic** version and can be composed of two or three stainless steel rod modules, while the lamp's head is made of anodized and painted aluminum.

ITA

Giraffe, la nuova lampada da terra PLG nasce dalla linea slanciata, elegante e maestosa del mammifero più alto esistente.

Elementi chiave che "Giraffe" riprende dal suo animale di ispirazione sono il lungo collo che permette di vedere lontano, la forza poderosa e bilanciata alla base, e le sue tipiche corna, simbolo di unicità e protezione, che allo stesso tempo conferiscono al design della lampada un tocco di carattere.

Essa combina il fascino mastodontico e singolare della giraffa e il piacere di una **luce dall'alto** sofisticata ed elegante.

Così come la giraffa, il nuovo prodotto PLG cattura immediatamente l'attenzione con il suo design/corpo longilineo e la sua grande capacità di adattamento. Infatti la struttura di Giraffe le permette di ambientarsi in spazi **outdoor e indoor**, ed è dotata di un' asta regolabile a diverse altezze e il capo orientabile in diverse direzioni in base alle necessità dell'ambiente.

La lampada è disponibile in versione **fissa** o **telescopica** e può essere composta da due o tre moduli di aste in acciaio inox verniciato, mentre il corpo luminoso è in alluminio anodizzato e verniciato.
